

sent

Origin:

Takahashi

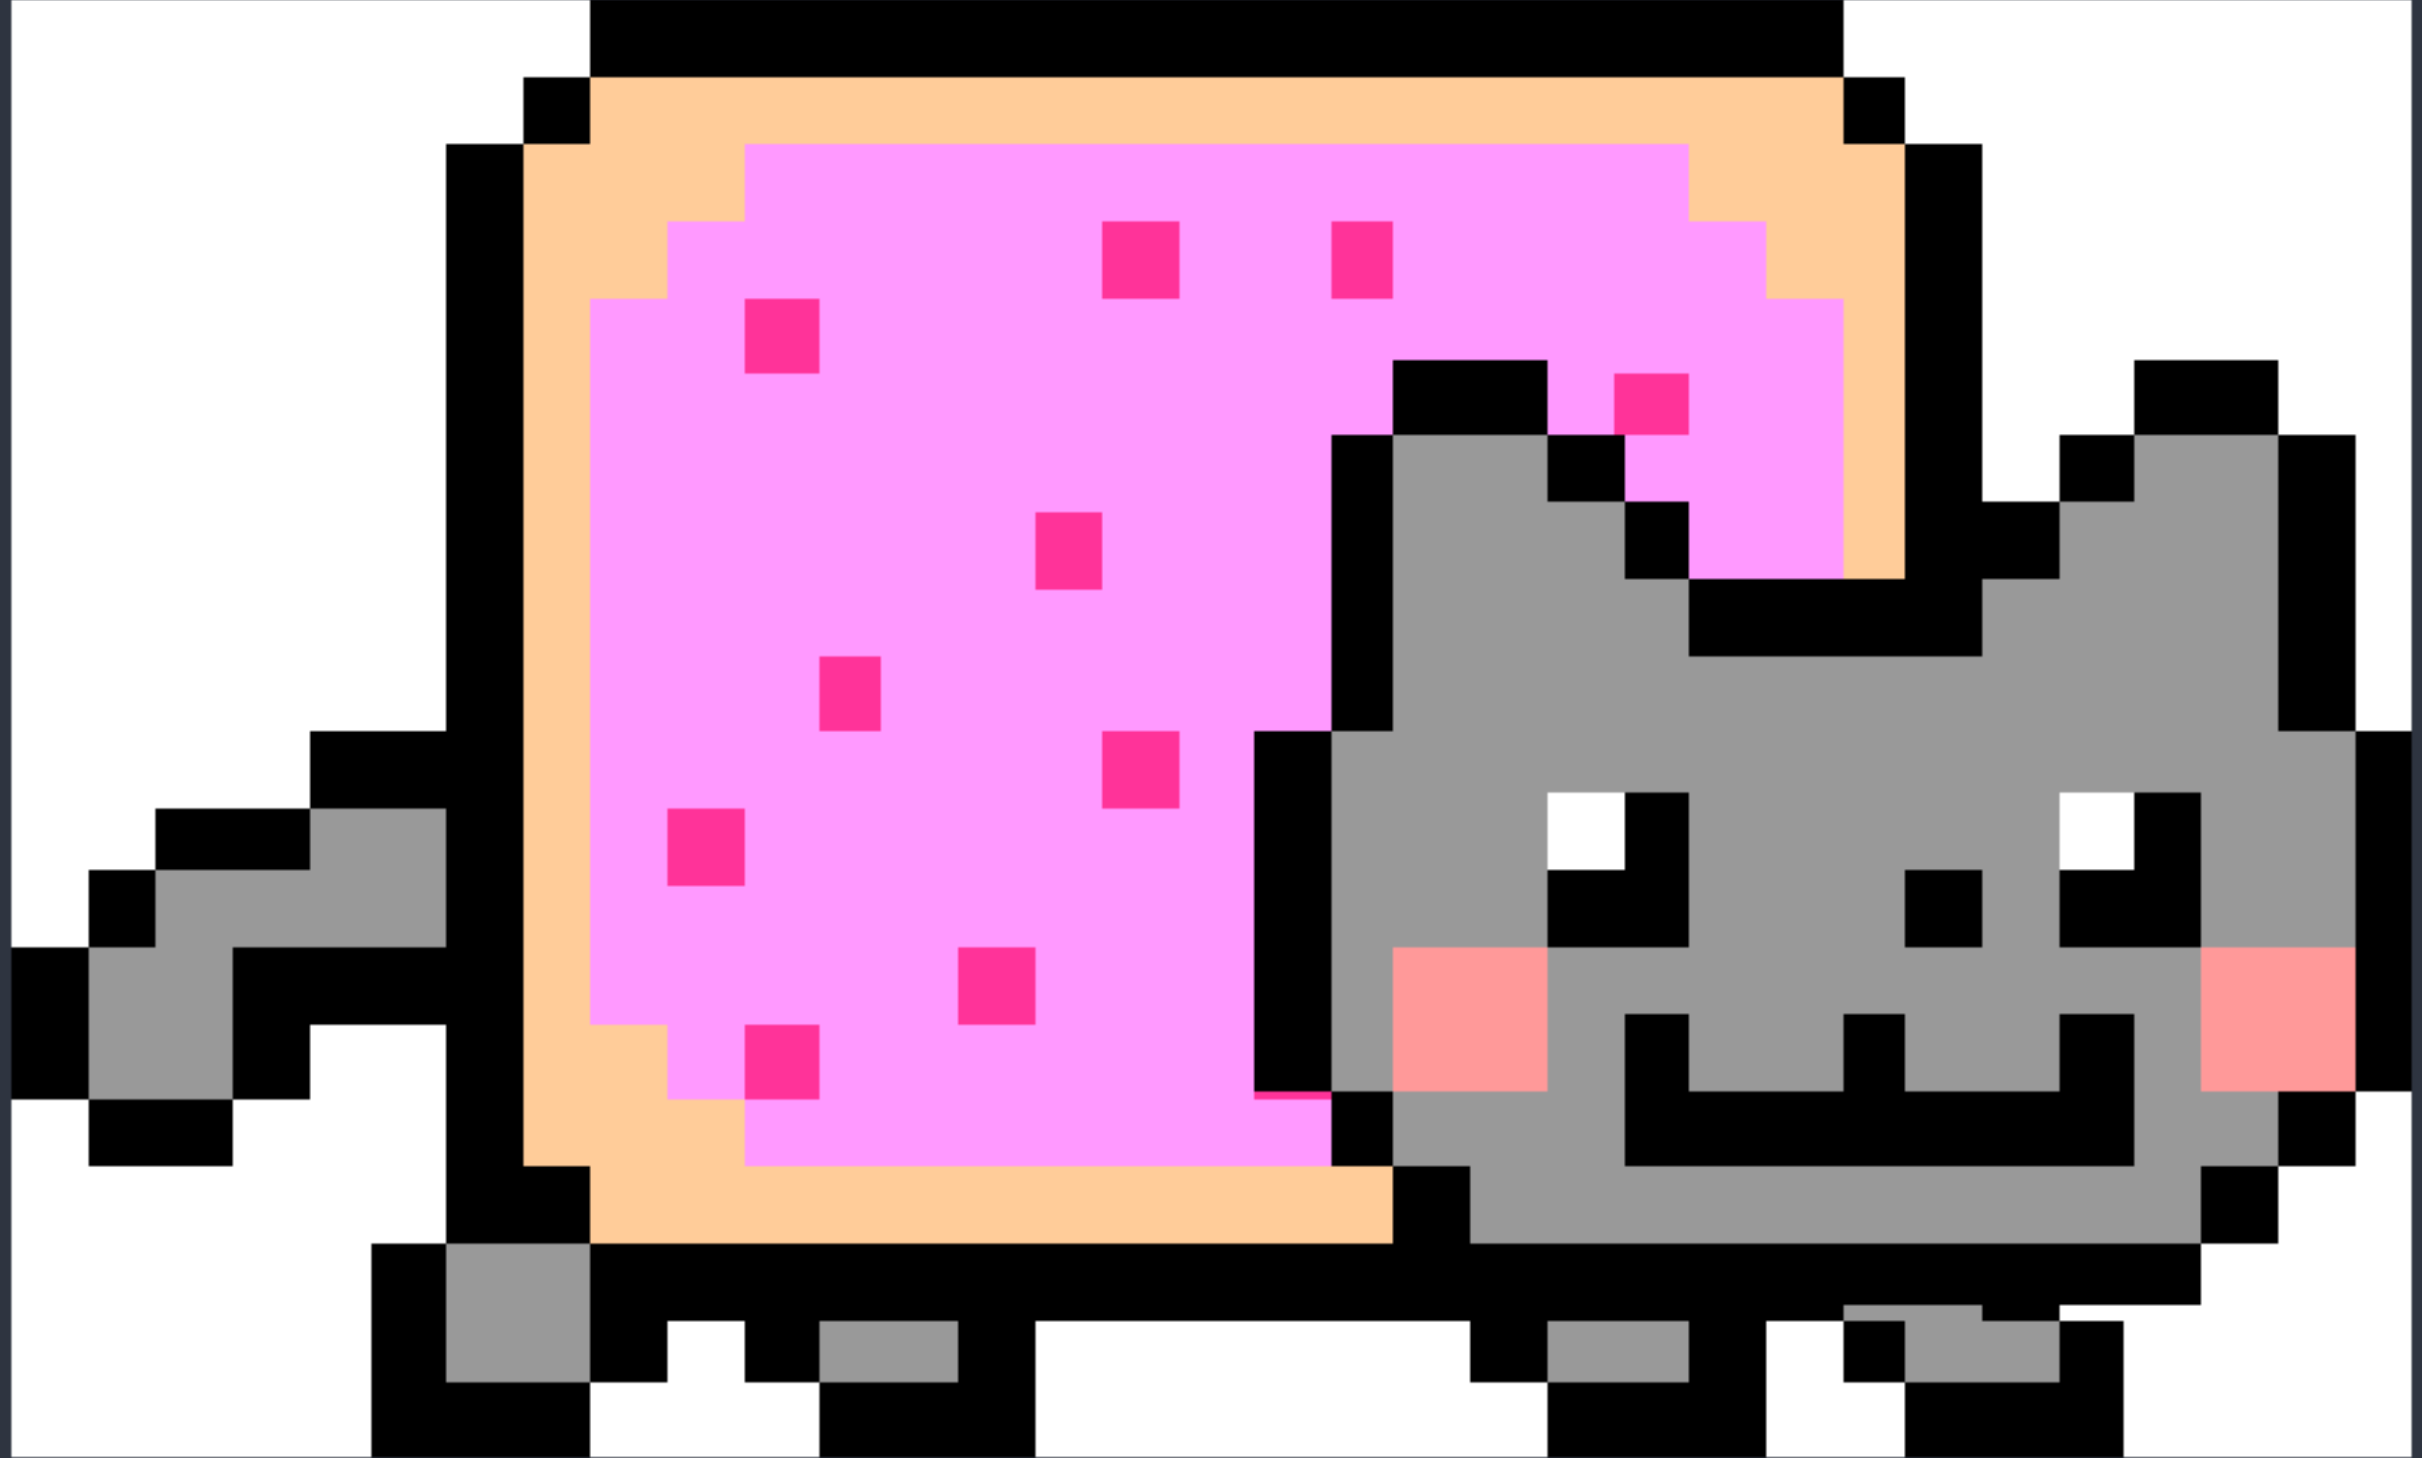

# Why?

- PPTX sucks
- LATEX sucks
- PDF sucks

also:

terminal presentations

don't support images...

easy to use

---

depends on

Xlib

Xft

farbfeld

~1000 lines of code

usage:

\$ sent FILE1 [FILE2 ...]

- ▶ one slide per paragraph
- ▶ lines starting with # are ignored
- ▶ image slide: paragraph containing @FILENAME
- ▶ empty slide: just use a \ as a paragraph

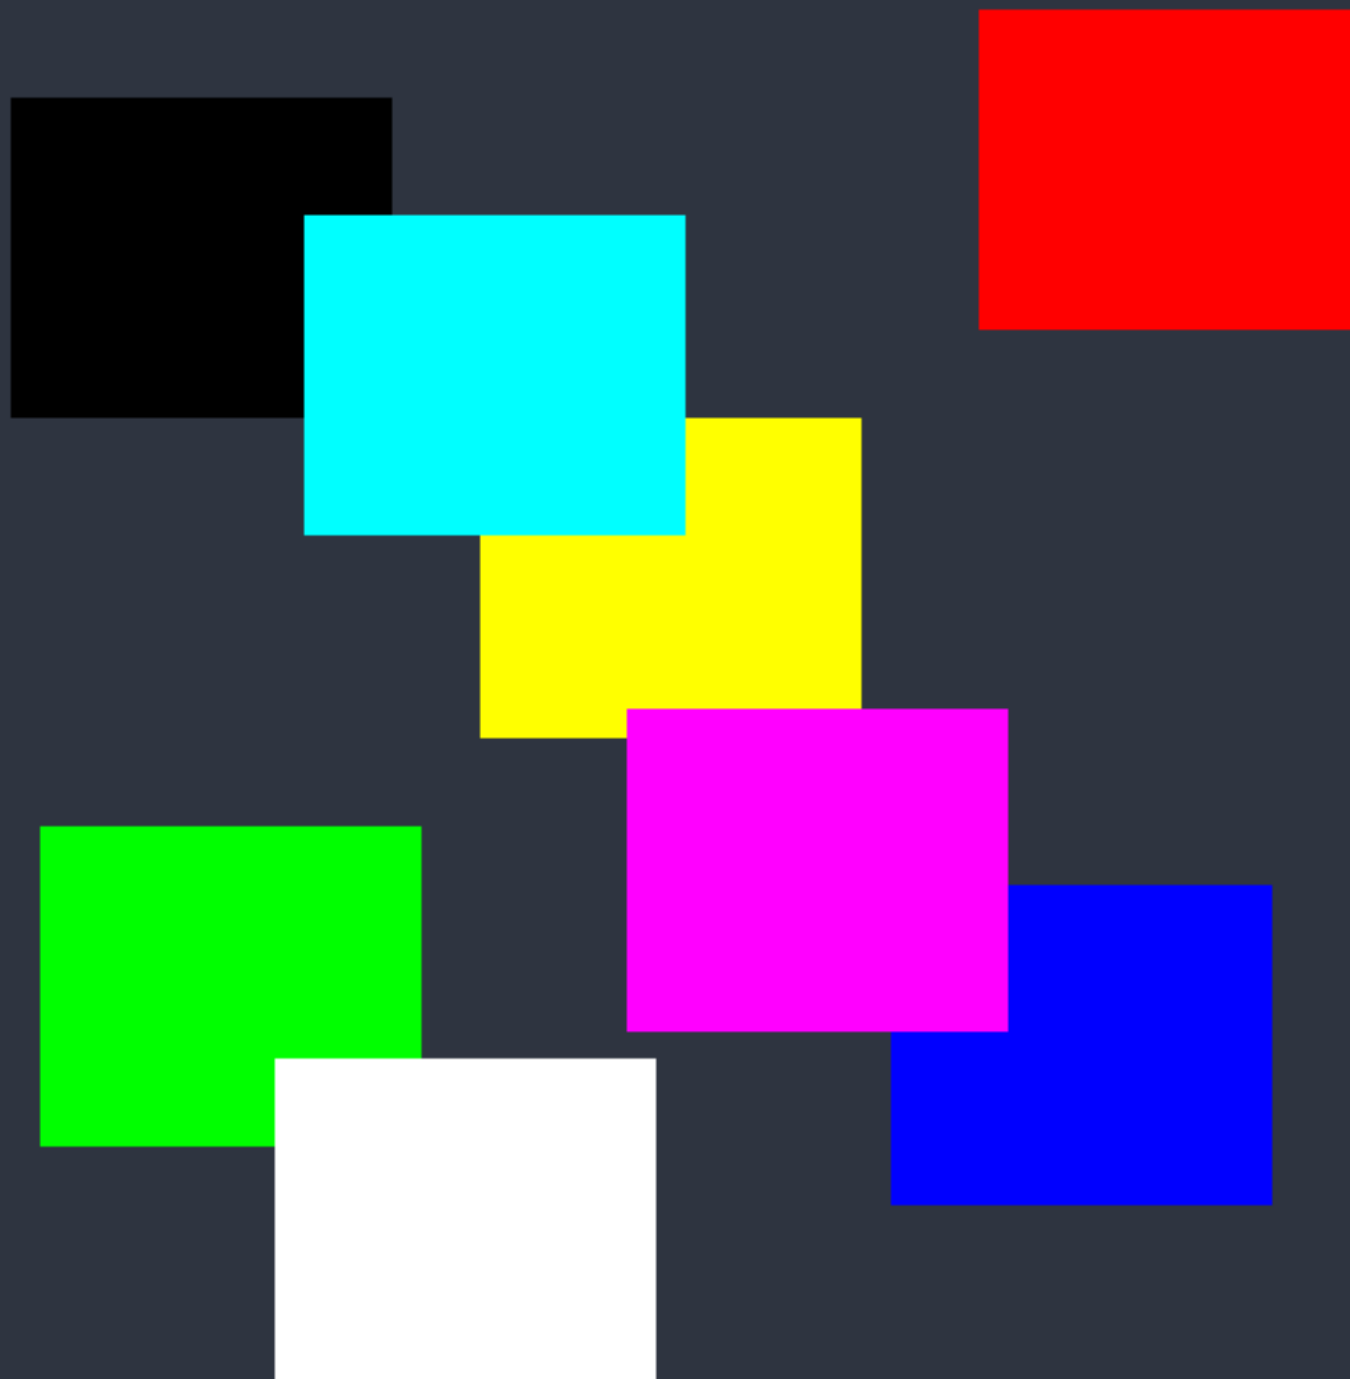

@this\_line\_actually\_started\_with\_a\_\.png

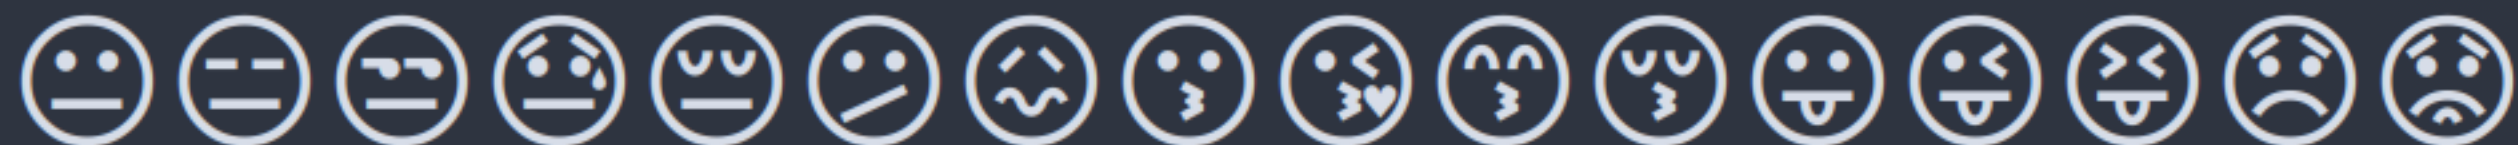

#This line as well

⇒ Prepend a backslash to kill behaviour of special characters

Images are handled in the  
<http://tools.suckless.org/farbfeld/>  
format internally.

sent also supports transparent images.  
Try changing the background in config.h  
and rebuild.

thanks.
